REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The instant application is directed towards an unobvious method for operating a gas turbine engine. Particularly, Applicant claims an intercooler system between a first and second compressor wherein evaporatively cooled air is feed into a heat exchanger to reduce the temperature of compressed air flowing from the first compressor.

Intercoolers are well known in the turbine art. Prior art examples such as US Patent 5,758,485 to Frutschi, US Patent 4,751,814 to Farrell and US Patent 5,937,633 to Wang all teach using either a heat exchanger or an evaporative cooler between the low and high pressure compressors. None of the references however teach using both an evaporative cooler and a heat exchanger in combination. Further there is no motivation given to evaporatively cool the cooling air before using it in the heat exchanger as claimed by Applicant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
